Chassis Mounts

Chassis Mounts connect wheel suspensions with the chassis. Their damping function is essential to vehicle stability and road holding as they help to minimize effects of road surface excitation. At the same time, Chassis Mounts help to isolate tire noise for increased driving comfort. Vibracoustic's advanced design is able to absorb high loads and to protect passengers from sudden shock inputs.

Hydro Bushing

- Hydro bushings stand out for their low basic stiffness combined with comfortable braking and acceleration progression.
- Radial and axial rubber stoppers are integrated to limit radial and/or axial displacement and cover high loads.
- Hydro fluid is used to provide damping, ensuring a smooth and comfortable ride.
- The outer housing can be optionally made of lightweight aluminium, offering improved resistance to corrosion.

Improved damping and isolation compared to conventional bushings

Reduction of unwanted vibrations by hydraulic damping

Comfortable braking and acceleration progression

Increased driving comfort
